

Gas Baffle Doors for HRSGs

Are your offline inspections incomplete because there is “no access” or “difficult access” to internal HRSG components? When it comes to HRSG crawl spaces, what you can’t see can hurt you...or at least your availability!

Gas Baffle Doors with troublesome bolts requiring wrenches, crowbars or chisels are obstacles to thorough inspections.

HRST has designed a series of gas baffle doors that are:

- Easy to Retrofit
- Easy to Open & Close
- Light Enough for One person to Handle
-  The gas baffle doors can be easily opened or closed without any tools & from either side of the gas baffle.

The doors can be installed in vertical or horizontal surfaces.

HRST gas baffle doors (above) can be fabricated in nominal sizes from 12” wide by 12” high to 36” wide by 36” high.

Materials used will be suitable for the temperature and location within the HRSG.

Installation is simple. Cut a hole in the existing baffle. Hold the shop assembled door and frame in place & skip weld frame to existing baffle.
