

## Access Doors for Gas Turbine HRSGs

Access doors, like the examples below, cause problems:

- Bolts break
- Casing hot spots
- Heavy, bulky, hard to open.
- Often require two people to open/close safely.

Proper doors can be opened and closed quickly by one person.

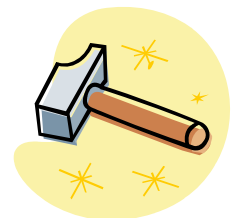

Hard to open bolted doors with hot spots

Retrofit HRST Access Door

Open and close quickly with just a hammer!

HRST access doors are designed with these features:

- Retrofit in to existing door opening, if required.
- Easy to open & close
- Avoid casing hot spots
- Easy to seal
- Light enough for one person to handle.

Doors can be fabricated in sizes from 12" x 18" to 24" x 48".

Retrofit in all areas of the HRSG, including inlet ducts and burner ducts.

Doors can be installed on the wall, roof or floor casing.
